

# Model Quality and Improvements

## Project Deliverables

You will be required to submit:

- A GitHub repository with your project written in Python or R.

## Instructions

### Problem Statement

As a data professional working for a pharmaceutical company, you need to develop a model that predicts whether a patient will be diagnosed with diabetes. The model needs to have an accuracy score greater than 0.85.

You will be required to document the following steps:

- Data Importation
- Data Exploration
- Data Cleaning
- Data Preparation
- Data Modeling (*Using Decision Trees, Random Forest and Logistic Regression*)
- Model Evaluation
- Hypparameter Tuning
- Findings and Recommendations

### Dataset
